FusionSight® night & day vision enhancer

Fully digital, FusionSight® is the world-first compact monocular combining two viewing modes - thermal and color low light - to be fused or used separately.

This reliable handheld device is most efficient when used to unveil camouflaged enemies in operation. Enhancing threat and target detection, FusionSight® is an essential device for Police and Homeland Security during investigative missions, for both short and long-term surveillance tasks. FusionSight® also offers significant visual support for search and rescue missions, even with limited visibility conditions.

FusionSight® allows for evidence pictures' snapshots and live streaming on multiple interfaces.

Its ergonomic design has been inspired by users' needs (Comfort, lightweight, 7-hour autonomy).
